

Recommendation to measure

- ROLLER BLIND
- MAGIC LIGHT

Width of the curtain

In a window with space on the sides is recommended to add **10 cm** on each side of the woodwork.

If there is a tape blind or a button we could also make the biggest curtain to cover them.

Keep in mind that the fabric makes less than 4 cm wider than the full measure of the curtain.

Curtain width no room on the side

In a window without margin between the side wall and the window is convenient to take the measurement from the side wall to **10 cm** of the other end of the window.

If there is a tape blind or a button we could also make the biggest curtain to cover them.

Keep in mind that the fabric makes less than 4 cm wider than the full measure of the curtain.

Two curtains for window

In a window where you want to put two curtains like the picture, take the measurement from the middle up to **10 cm** over the frame.

Keep in mind that the fabric makes less than **4 cm** wider than the full measure of the curtain between the two tissues remain spaced **4 cm** from the center (**2 cm** of each curtain)

Curtain width no room on the sides

In a window without margin between carpentry and sidewalls **discounting 0,5cm** per side. In order to be climbing a ladder and take the extent the party will shade installed.

Keep in mind that the fabric makes less than 4 cm wider than the full measure of the curtain.

Height curtain door

In a window that is not attached to the ceiling we can measure **15 cm** above it or **to the ceiling**. If the window handle protrudes is recommended to measure up to the ceiling so when installing curtain to separate it takes to save the lever.

If the window is opening inwards need a minimum distance of **10 cm** between the sash and ceiling.

Height of the curtain on window

In a window that is not attached to the ceiling we can measure **15 cm** above it **or to the ceiling**. If the window handle protrudes is recommended to measure up to the ceiling so when installing curtain to separate it takes to save the handle without brackets. We can also take the measure to the floor.

If the window is opening inwards need a **minimum distance of 10 cm** between the sash and ceiling.

Curtains in angle of 90 °

For measuring windows at 90 ° we have to deduct 9 cm to one of the two curtains, in this case we have granted to the **curtain B**.

For this situation is highly recommended that falls fabrics are inland.

These measures are approximate, with these basic tips you can take steps as best fits the space you want to cover with curtains.
